

Project Beginning Analysis

- Restate the topic of the project. Include a drawing/picture if you think it helps describing your project.
- Theory: explain what you will compute
 - draw a FBD
 - write down the equations
 - explain how you will solve (e.g. how do you get the data (mass, coefficient of friction, etc))
- Experiment: explain what you will measure, and how you will use the experimental data to validate your theoretical computations.
